Progress

- Writing up BSPR Report
- Change of platform
- Writing up simple classes that can store nodes
- Learning A* algorithm

Problems Encounter

- Research into existing indoor GPS system. Not much found. Struggling to find relevant literatures.

- Finding time consuming to learn new technologies-to get up to scratch with speed. Can I just write some java classes inside intellij and then perhaps transfer this into app later?

Next Step

- Finish the tutorial for learning Android Studio
- Working on the design and layout using the new platform. Try to improve the layout of the app.
